

AMENDMENTS TO THE SPECIFICATION

Page 2, 3rd paragraph, please amend as follows:

The present invention thus provides a fluid spray head comprising an expulsion channel provided with a spray orifice and a spray profile formed in an end wall of said spray head, said spray profile comprising preferably non-radial spray channels opening out to a central spray chamber disposed directly upstream from said spray orifice, an insert being disposed in said expulsion channel so as to form the base surface ~~a cover~~ for said spray profile, the central axis of said insert being substantially identical to the central axis of said expulsion channel, and said spray head including centering means for centering said insert.
